FLASHPOINT

Proactive Acquisitions

Every organization has a standing portfolio of digital assets like email addresses, login credentials, and security logs that must remain safe. Additionally, insiders may post tutorials or other proprietary company information to online networks. If leaked, these items are often inexpensive to acquire but require immediate detection and response to prevent potentially devastating impacts. Rather than waiting to discover the breach and submitting a Request for Information (RFI) to Flashpoint, our analysts will actively monitor these assets and proactively acquire them on your behalf, ensuring that they don't become vectors for more serious cyber attacks.

Flashpoint's Proactive Acquisitions service is powered by our Curated Alerting team which has decades of experience navigating illicit online communities, assessing risks, and interpreting foreign-language content.

Benefits

- Safe access to large, curated collections of publicly available information
- Cloud-based environment that is portable, scalable and extensible
- Intelligence that is vetted, proven, trusted and evidentiary
- Real-time and historical context available on-demand
- Innovative solution ensures timely results backed by proven tradecraft and processes

Digital asset examples

- Security logs
